

HAT-TRICK D®

All-Natural Plant Food and Protection

Active Ingredient: *Bacillus Amylolyquefaciens* strain D203

Directions

For Commercial Use: *For foliar applications, apply 1 lb. of product per acre in 80-100 gallons of water and apply between rows and on plant. Start applying three days before planting and every 10-15 days if desired. Apply 2 lbs per acre in 80-100 gallons of water when plant disease is present or for preventative measures.*

For seed treatment: *Make solution with 2 tablespoons of product for every gallon of water and mix 5-10 lbs of seed per each gallon of solution.*

For garden/green house use: *Mix 1 tablespoon per each gallon of water and apply to soil around plants, vegetables and trees. Apply in and around root zone before planting. Follow seed treatment instructions above for even greater results.*

Beneficial for plant health:

- 1. When applied with conventional NPK fertilizers, can limit use of such fertilizers by as much as 50%.*
- 2. Field trials have shown yield increases by as much as 10-30% on most agricultural and greenhouse crops.*
- 3. Acts as a natural plant protector against most plant diseases and many common insects.*
